

Purchasing, Distribution, Sales and Stock

Enterprise can help you Make, Buy, Move and Manage your Stock and Supplies.

Enterprise allows you to combine the power of the Stock, Purchasing, Sales and Distribution menus so that you can act as part of a fully functional Supply Chain – as a customer, supplier or both.

The Purchasing menu handles the purchasing and requisitioning of the goods, materials and services that you buy in. Keep track of, and manage what your business buys. Full transparency ensures you retain full control of the buying process - and over who buys what in your business. Generate manual purchase orders or let the system do it for you - based on your own buying rules and min / max stock levels. Invoice validation compares invoices against the goods you actually receive so you only pay for what's arrived. Full supplier monitoring is also included and you can even create preferred supplier lists and compare prices from competing suppliers. The in built Supply facility produces and maintains call off schedules against purchase orders so you can work with others in planning your stock and levels of production down to the finest detail. Full supplier monitoring keeps a check on how your supply partners perform against targets over time and purchase invoice reconciliation checks incoming supplier invoices against un-invoiced goods receipts, purchase order prices.

The Stock Management menu allows you to perform a range of functions, from essential and basic stock management to kitting

and stock supply forecasting. Fully integrated and straight forward order entry allows you to view and review how your items in stock change over time (and in real time) as the delivery, production and distribution process progresses. Enterprise includes integrated goods receipt, invoice clearance and production booking includes a quality control and quarantine stores facility.

The Sales menu provides an effective facility for handling the distribution and logistics process vital for any company that depends on knowing exactly where it is in the delivery and field support process. Effective distribution management helps you increase your warehouse efficiency, streamline your fulfilment process and ultimately improve your customer service. As elsewhere in Enterprise, any information entered or changed in any of the sales screens is instantly reflected throughout the entire system. You can activate despatch and generate accurate invoices in real time and all the documentation you produce links accurately and efficiently to the Sales and General Ledgers with minimum fuss and click-work. Enterprise can handle serial number tracking, picking and shipping and it can assign dispatches to geographical truck runs.

CGram Software™
Integrated Software for Business

Named as Best Business Software for Linux at the UK Linux and Open Source Awards 2005
Runner Up, Best Mid Range Package Computing Magazine & Accountancy Age 2005

Enterprise helps you connect the people, process and technology in your company.

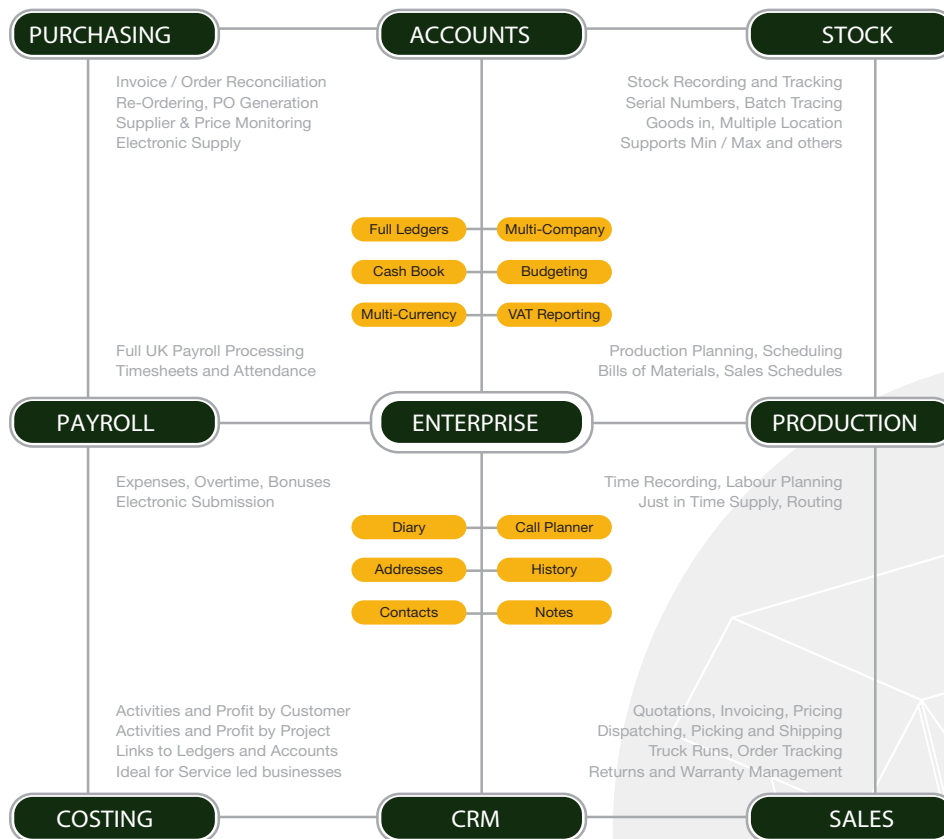

CGram Software™

Enterprise is a single and fully integrated business management solution able to handle all of your Accounts, Stock, Purchasing, Production, Payroll, Selling, CRM, Customer Service and Business Administration needs. Apart from costing you less in terms of buying and supporting several specialist applications, having integrated software like this means it's easier for everyone to understand and automate more of what they do. When everything's connected you can seriously reduce your data entry overhead and administration. Everybody involved in delivering your products or services share a consistent process and an up to date view of your customers, prices, products, stock and suppliers. When you share and connect the information in your company like this you can do more and more quickly, with less scope for error and this usually means you get things done for far less overall cost. From a manager's point of view, integrated software means reports come from one system that's always available, up to date and able to provide accurate information relating to any area of the companies activities.

Enterprise also means Affordable Award Winning software that's Secure, Flexible and Reliable, developed using the most exciting technology available today. When you use our software you're using a blend of technologies you can trust. You're using a system clever enough to change and scale, and one that's ideal for use in a 'mixed' environment (where you want run Windows, Linux and even Apple Macs together). It's a real solution for those who want the cost and affordability benefits of using Linux, but who also wish to retain the value of their past investments in other technologies.
